

KENERSYS

 **KENERSYS TAILORMADE O&M™**

YOU HAVE A FREE CHOICE

BRIGHT PROSPECTS WITH TAILORMADE SERVICES

KENERSYS TAILORMADE O&M™ gives KENERSYS customers the liberty to choose a service package that really meets their specific requirements.

The KENERSYS TAILORMADE OPERATION AND MAINTENANCE concept goes beyond what is expected by today's standards:
You have a free choice between SERVICES ON DEMAND, the BASIC SERVICE, the FULL SERVICE or the O&M FULL CONTROL. O&M FULL CONTROL is absolutely spearheading, as it enables you to self-service your turbines.

YOU HAVE THE FREE CHOICE

You wish a high degree of flexibility or maximum security? Or would you like to have full control by self-servicing your KENERSYS turbines? The KENERSYS TAILORMADE O&M™ service packages meet your requirements and give you the full liberty to select separate services.

KENERSYS O&M FULL SERVICE

O&M FULL SERVICE contracts cover many years and give you a long-term investment security with an availability guarantee. All main services like trouble-shooting at the site, the biannual maintenance service, gearbox oil exchange, blade inspection and maintenance are included in this package to ensure a maximum energy output and availability at a fixed price.

KENERSYS O&M BASIC SERVICE

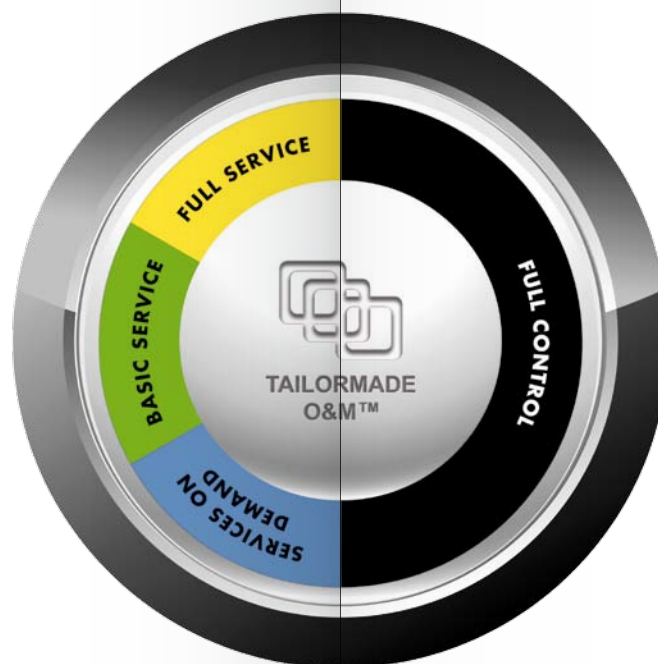

With O&M BASIC SERVICE you combine basic security with flexibility: The major risks are covered, additional services can be booked on demand. O&M BASIC SERVICE comprises the preventive maintenance including the relevant consumables. And keeps you updated with the monthly performance report and the CASCADA™ access, which are also included.

KENERSYS O&M SERVICES ON DEMAND

You prefer to organise the turbine service and maintenance case by case? Working with the O&M SERVICES ON DEMAND will be the right choice for you. The O&M documentation update is included as well as the CASCADA™ access – almost everything else can be added individually at a fixed price or based on a quotation.

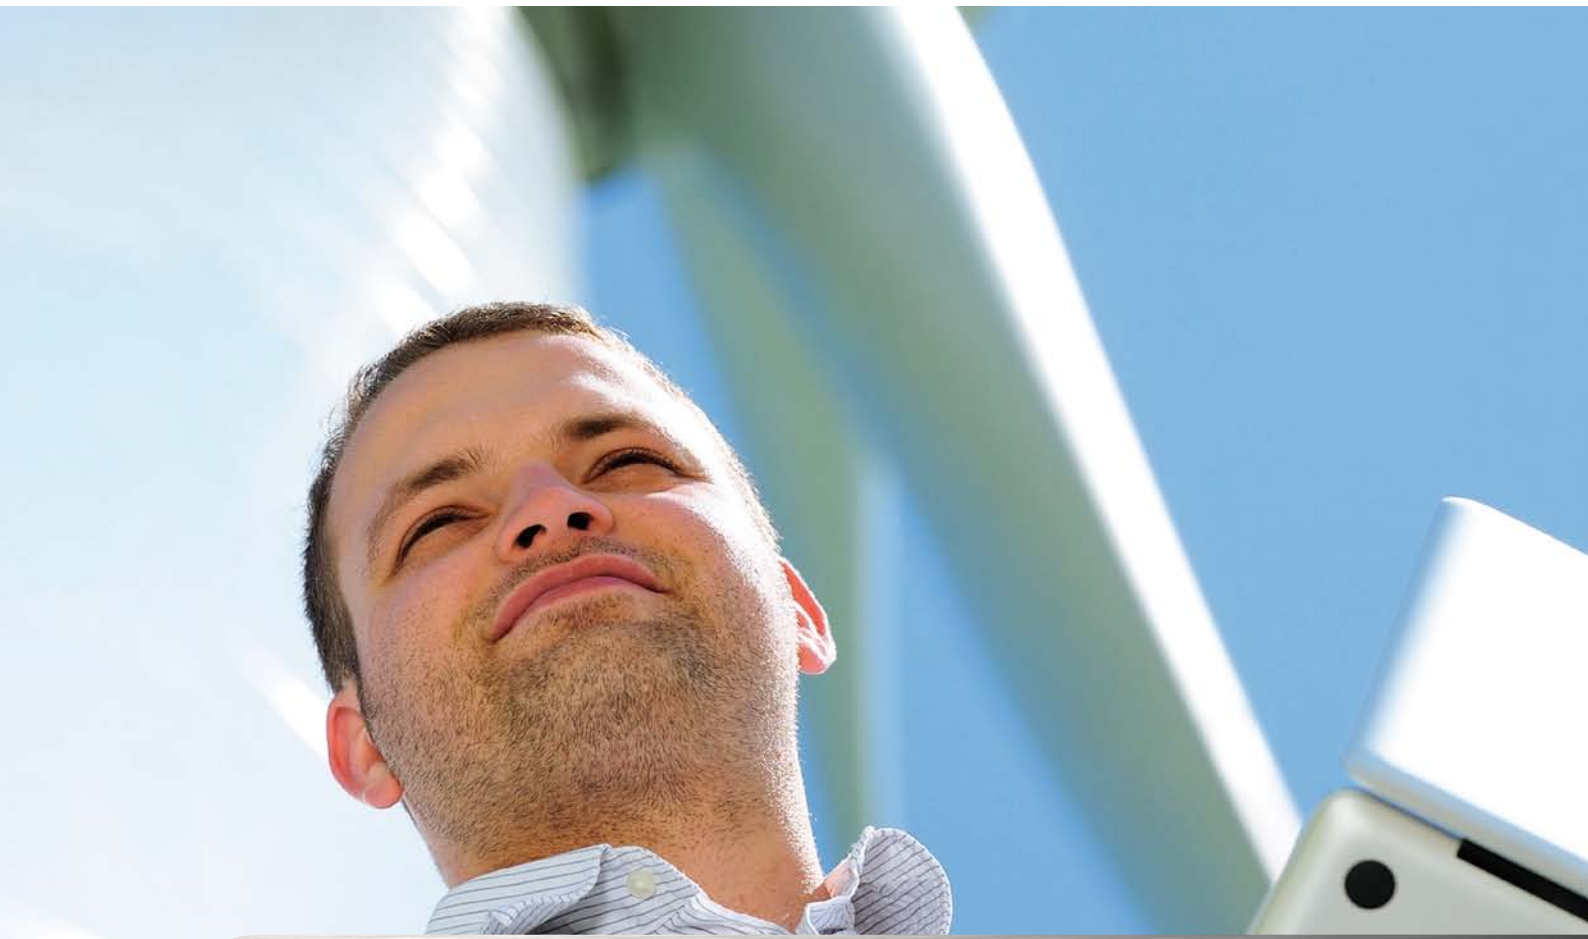

The KENERSYS CASCADA™ is included in all service packages and offers you a new standard in wind turbine supervision and control with a cascade of possibilities in monitoring, remote control and data integration. It provides individually customisable reports, alarms and availability calculations.

KENERSYS O&M FULL CONTROL

Many utilities, project developers and IPPs are looking to establish own service departments and companies to maximise their project IRR. KENERSYS provides the unique Open Source Service Concept, an unprecedented way that enables you to operate and self-service your KENERSYS turbines. We train you in detail on the KENERSYS turbines, share detailed information about spare parts and give you an extended access to the CASCADA™ system.
